

SYNTHESIS™

porcelain shower system

Synthesis Installation Kit

The Synthesis Installation Kit includes essential tools for installing any Synthesis shower or tub surround.

FEATURES

- Aluminum jigs make it simple and easy to correctly place the receivers at the correct heights in the stud cavities to align with the panel tracks and clips
- Adjustable from 34"W to 60"W, accommodating most standard shower and tub dimensions
- Adjustable for height of tub or shower using joining plate(s) after field modification
- Smaller sizes may be accommodated via field modification and purchase of additional joining plates
- One-time tool purchase can be used for multiple Synthesis installations

CONTENTS OF KIT

- One vertical aluminum jig with eight fixed clips and one joining bracket
- One long horizontal aluminum jig (supplied in two pieces) with four fixed clips and one joining bracket
- One short horizontal aluminum jig with four fixed clips
- One epoxy applicator gun for use with a 250ml 10:1 cartridge

SHIPPING

All products are shipped FOB Solon, Ohio.

Visit SynthesisbyPCS.com/Products for more information on these and other Synthesis products.

Assembled in the USA

* Porcelain contains crystalline silica. Dry-cutting Synthesis panels may produce respirable silica dust which, with long-term exposure, is known to cause Silicosis, an irreversible but preventable lung disease, and may also cause other serious diseases including lung cancer. Always cut Synthesis panels with water and wear a safety dust mask approved for silica dust.
