porcelain shower system

Synthesis Cutting Kit

The Synthesis Cutting Kit includes an assortment of recommended blades, bits, and tooling for use in trimming, scribing, and modifying Synthesis wall panels.

FEATURES

- Kit consists of the recommended tooling to cut and machine Synthesis panels. Core bits are included in the most-commonly used sizes.
- Kit contains the following:
 - one 5" porcelain cutting blade
 - one 3/8" diameter core bit
 - one 1-1/4" diameter core bit
 - one 3-1/2" diameter core bit
 - one small finger bit
 - one 4" backer pad
 - one 4" dry diamond polishing pad
- All tooling for use with an electric angle grinder with a 5/8"-11 arbor. Variable speed and minimum 13amps recommended.
- Additional tooling may be required on an as-needed basis for more custom installations.
- Angle grinder not included.

SHIPPING

All products are shipped FOB Solon, Ohio.

Visit SynthesisbyPCS.com/Products for more information on these and other Synthesis products.

* Porcelain contains crystalline silica. Dry-cutting Synthesis panels may produce respirable silica dust which, with long-term exposure, is known to cause Silicosis, an irreversible but preventable lung disease, and may also cause other serious diseases including lung cancer. Always cut Synthesis panels with water and wear a safety dust mask approved for silica dust.
