

SYNTHESIS INSTALLATION KIT INSTRUCTIONS

What is in the Installation kit?

- 90" Vertical jig
- Joining bracket
- 4 Adjustable "L" channels
- 4 Adjustable "T" channels
- Magnets to brace and align the sidewall brackets
- 250ml Epoxy Applicator

The Vertical Jig

This Jig can be cut down to any size. Use the joining bracket to restore it to its original size

Cutting the Vertical Jig

- Always Cut the vertical jig at the top. (Not the end with the cutout)
- When cutting the vertical jig, place it square on a miter saw using a nonferrous metal blade.
- You must cut slowly to get a clean cut.
- Use the provided joining plate to restore the vertical jig to its original size.
- Place both pieces tight to each other. Use a level or a straight edge to assure that the 2 pieces are in line
- Place the joining plate so that there are 4 screws on each side of the cut and tighten down.
- Check with a level or straight edge to make sure that the 2 pieces are connected and stayed true

WARNING

Always wear eye protection when cutting any materials

Using The Epoxy Applicator

- When using the epoxy applicator remember time is critical.
- Always remember to purge the static mixing tip prior to using.
- Purge the static mixing tip by pressing the trigger 4 times to ensure the epoxy 2 parts are properly mixed.
